Smart-ID+

Introducing new **phishing-resistant** device link-based flows

With enhanced cryptographic standards

Smart-ID+ introduces enhanced verification steps that make social-engineering attacks nearly ineffective.

Social engineering fraud

Gaining personal trust
Used to obtain login codes or approve transactions

Gaining personal trust
Used to obtain login codes or approve transactions

Used to obtain login codes or approve transactions

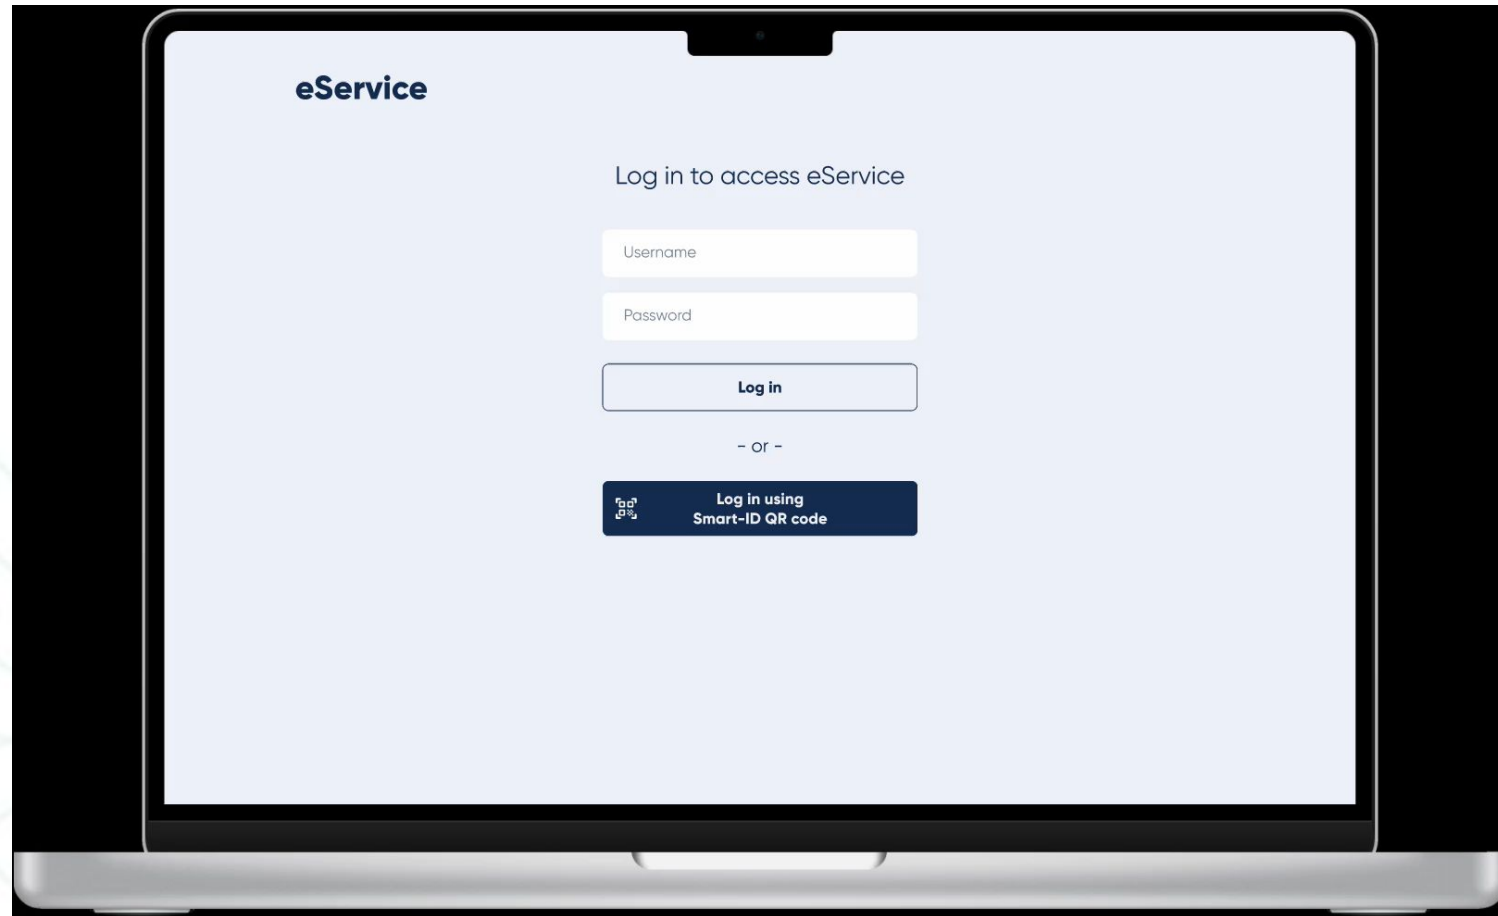

Phishing / Phone scams

Fraudsters impersonate authorities
Victim is guided to enter Smart-ID codes

Device link flows

UX: Learning Meets Convenience

Learning

- Getting used to new flows
- Scanning QR code with App

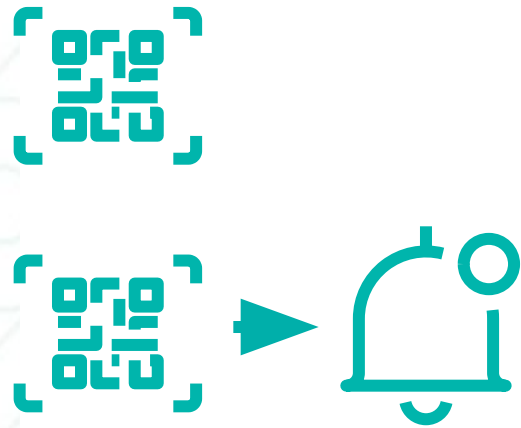

Convenience

- No need for personal code input
- No need to compare VC
- Faster and smoother*

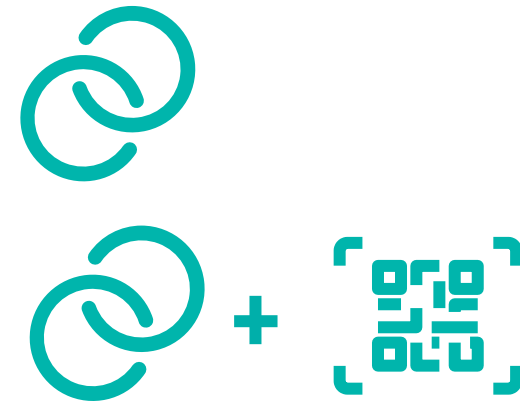

Smart-ID+

Combining different flows

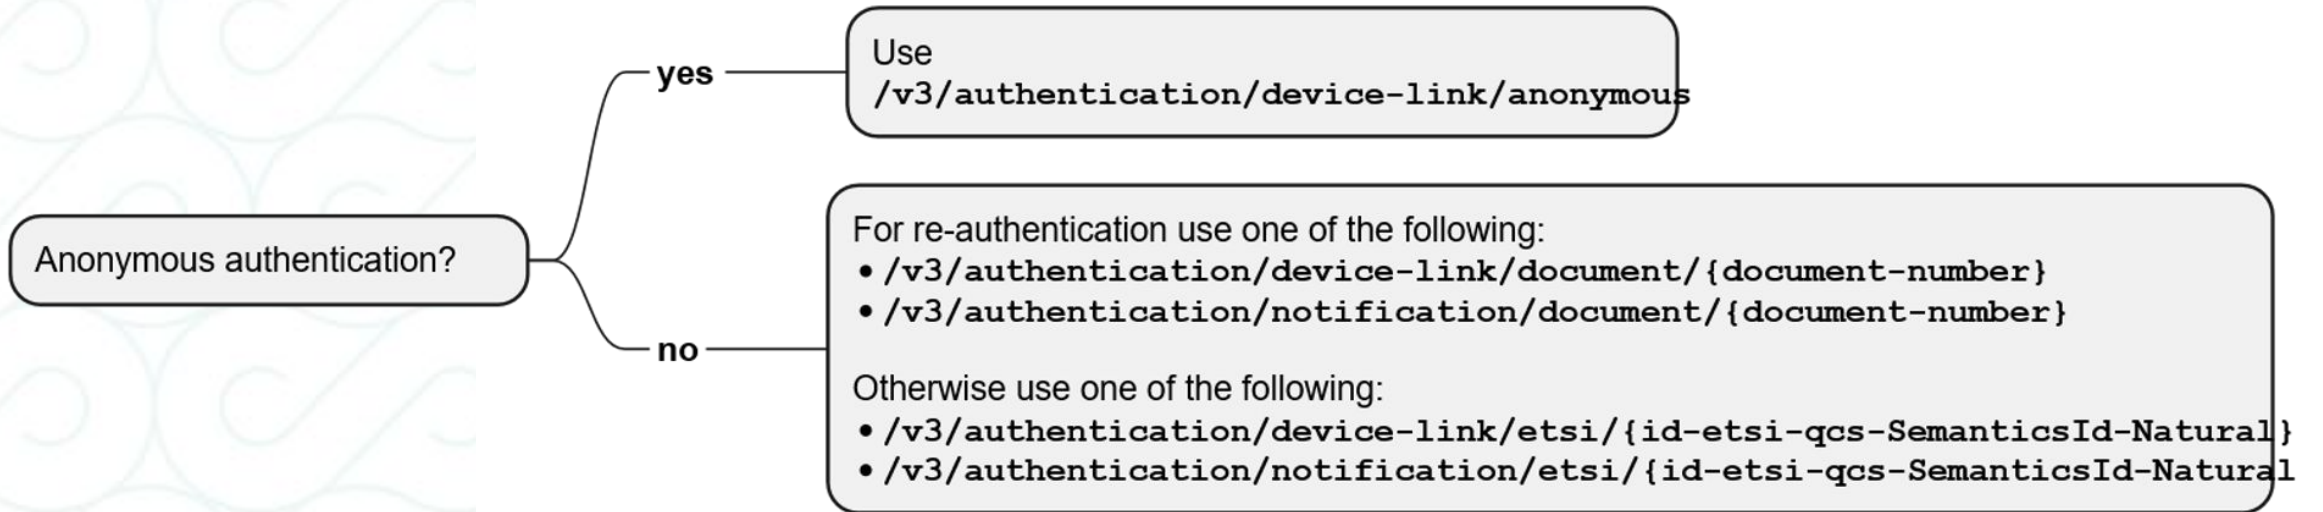

Cross-device flow

Same-device flow

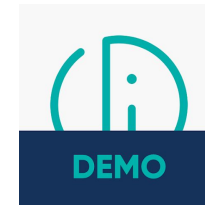

Initial anonymity as an option

Integration highlights

1	Device link and authCode generation
2	Dynamic QR code generation for cross-device flow
3	Callback URLs used for app2app and web2app flows
3	SHA-3 and RSASSA-PSS are supported in new API

Integration support
